Package 'growthfd'

December 10, 2021

Title Fitting FPCA-based growth curve model

Version 0.0.0.9000

Description
This package provides a method for fiting an FPCA-based growth curve model described in the paper stated bellow. This research was funded by Technology Agency of the Czech Republic (Technologická agentura České republiky), grant number TL01000394.

R topics documented:

growthfd.evaluate *Generate a Discrete Growth Curve*

Description

This function evaluates a curve function for given ages. Depending on a degree of derivation, the function produces stature, velocity or acceleration curve.

Usage

```
growthfd.evaluate(x, par, model, deriv = 0)
```

Arguments

x	Ages to be evaluated
par	Parameters of the model
model	FPCA growth model
deriv	Path to the input file

Value

Y-values of the evaluated curve

growthfd.fit *Fit a FPCA Growth Curve Model to the Data*

Description

This function fits a model to the given measured data.

Usage

```
growthfd.fit(model, age, height, nprint = 1)
```

Arguments

model	FPCA growth model to be fitted
age	Age at measured data points
height	Height at at measured data points
nprint	Verbosity

Value

An optimization result object

Examples

```
age <- c(6.9, 8.2, 10, 12.1)
height <- c(114, 122, 130, 141)
fit <- growthfd.fit(model.bgs.m, age=c(6.9, 8.2, 10, 12.1), height=c(114, 122, 130, 141))
x11()
growthfd.plot(model.bgs.m, fit$par)
points(age, height)
x11()
growthfd.plot(model.bgs.m, fit$par, from=0.5, deriv = 1)
x11()
growthfd.plot(model.bgs.m, fit$par, from=0.5, deriv = 2)
```

---

growthfd.plot *Plot a Growth Curve*

Description

This function plots a stature, velocity or acceleration curve.

Usage

```
growthfd.plot(model, par, deriv = 0, from = 0, to = 18)
```

Arguments

model	FPCA growth model
par	Parameters of the model
deriv	Path to the input file
from	The lower age limit
to	The upper age limit

---

growthfd.residuals *Compute residuals*

Description

This function computes residuals between measured stature data and data generated from the growth model.

Usage

```
growthfd.residuals(x, y, par, model)
```

Arguments

x	Vector with input ages
y	Vector with target height measurements
par	Parameters of the model
model	FPCA growth model

Value

A vector of residuals

`growthfd.std` *Generate a Curve Function*

Description

This function generates a growth curve function based on given model and parameters, describing the growth phase and amplitude.

Usage

```
growthfd.std(par, model)
```

Arguments

`par`	Phase and amplitude parameters
`model`	FPCA growth model

Value

FDA function object
